

WHAT YOU NEED TO KNOW ABOUT **INSIDER THREATS**

Over 30% of cyber attacks involve insiders. Over half of those attacks are motivated by financial gains.

The 3 Secrets to Thwarting Insider Threats

- 1) Try to deter insider threats from intentionally targeting you
- 2) Implement a zero trust architecture to protect your data
- 3) Simplify the detection of anomalous behavior and automate the response

Zero Trust - A modern approach to end-to-end security

- Protect data at the core
- Verify every user and application's interaction with data
- Continuously review permissions and access controls to file shares
- Ensure data integrity to prevent against manipulation and sabotage
- Audit everything and centralize the log repository
